NEW YORK, July 7, 2021: S&P Dow Jones Indices announced today that indicated **dividend net changes (increases less decreases) for U.S. domestic common stocks increased \$12.9 billion** during Q2 2021, compared to \$18.0 billion in Q1 2021, \$9.5 billion in Q4 2020, -\$2.3 billion in Q3 2020, and -\$42.5 billion in the COVID-inspired Q2 2020.

For the 12-month June 2021 period, the net dividend rate increased \$38.0 billion, compared to a net declined of \$22.7 billion for 12-month June 2020 period, as increases were \$58.1 billion versus \$46.9 billion, and decreases were \$20.0 billion compared to \$69.6 billion for 2020 period.

“Dividends are starting to be back in vogue as many companies that suspended their dividends have started to pay again, while others who decreased their dividends or left them unchanged in 2020, have resumed increasing their payments,” said **Howard Silverblatt, Senior Index Analyst at S&P Dow Jones Indices**. “The overall increase in U.S. common dividends stems from the quick vaccination rate, which has led to significant increases in consumer spending and fueled U.S. record profits and cash-flow.”

Silverblatt continued, “given the general acceptance of the reopening and absent a virus upswing, corporate confidence should continue to improve, as more return to resuming dividend payments and increasing them. At this point, for the S&P 500, 2021 is well on its way to a record payout with a 5% increase in the actual cash payments in shareholders pockets.”
